WORK EXPERIENCE

Full Stack Web Developer   October 2021 - Current
Freelancer - Full Time   Dominican Republic

• I have been working as a Full Stack Web Developer in many projects small projects for differents clients as e-commerce, ERP, Shipping Managments Systems and other Web Applications and mobile apps solutions. Working with the best technologies of today to provide cutting-edge performance according to the client's requirement, budget and long-term product scalability.

Web Developer   January 2020 - October 2021
IKompras - Full Time   Dominican Republic

• I helped the company in developing supply chain management for an ERP application of one of its major clients, using technologies such as C#, .NET Core 3.1, Razor, JavaScript, SQL Server, various libraries, and other technologies and concepts. My contributions were key in implementing stronger programming practices and ensuring that the system was scalable, easy to maintain, and capable of implementing new functionalities.
• I developed an e-commerce mobile application for a small business from scratch. As a requirement, it had to be developed using a new technology, which was React Native. This helped the company to expand, learn, and experiment with new technologies.

Software Developer   October 2017 - November 2019
Solumedios - Full Time   Dominican Republic

• Collaborated as a software developer adding multiple functionalities, new windows, visual arrangements, correcting errors, refactoring and maintaining the point of sale applications of the company's clients. I used C# as the primary programming language, working with .NET's Windows Forms for intuitive interfaces. Furthermore, I managed SQL Server and Oracle Database to ensure data integrity and security. For task management, I utilized Trello and GitHub as organizational and version control tools, respectively. Making company systems more efficient, faster, more user-friendly, scalable over time and easier to maintain.
